Notes:-

- (1) The offence time for overstay offences is the time the vehicle left the car park. If multi-visit overstay offences are activated, only those visits up to and including the visit which generated the offence are shown.
- (2) The offence time for non-return offences is the time the vehicle attempted to re-enter the car park.
- (3) Overstay and non-return offences both require an accurate entry and subsequent exit plate reading for an offence to be created.
- (4) Only unknown, hotlist vehicles or those in groups 10-20 can generate offences.
- (5) Offences will only occur when the offence time schedule allows.

The above report can be generated manually at any time and saved to a memory stick. The report can also be automatically emailed daily, weekly or monthly.

When generating the report you will choose to include those vehicles which exceed a specified number of offences within a specified period. You may also select which types of offences are included in the report.

This report is generated by the ANPR processor as a CSV file in order that it is also machine readable. For clarity we have added some text formatting to this sample and saved it as an Excel file.
