Notes:-

- (1) The offence time for overstay offences is the time the vehicle left the car park. If multi-visit overstay offences are activated, only those visits up to and including the visit which generated the offence are shown.
- (2) The offence time for non-return offences is the time the vehicle attempted to re-enter the car park.
- (3) Overstay and non-return offences both require an accurate entry and subsequent exit plate reading for an offence to be created.
- (4) Only unknown, hotlist vehicles or those in groups 10-20 can generate offences.
- (5) Offences will only occur when the offence time schedule allows.

The above report can be generated manually at any time and saved to a memory stick. The report can also be automatically emailed daily, weekly or monthly.

When generating the report you may select which types of offences are included in the report.

This report is generated by the ANPR processor as a CSV file in order that it is also machine readable. For clarity we have added some text formatting to this sample and saved it as an Excel file.
